

Textkraft main view and toolbar

Valid for all iPad versions 3.x and iPhone versions 1.x. Not any Textkraft version has all the features described!

The screenshot shows the Textkraft app interface with a status bar at the top (Carrier, 4:21 PM, 100%) and a toolbar at the bottom. Eight numbered callouts (1-8) point to specific features:

- 1** The plus (+) button **creates a new text document**. The document will be placed right beside the currently foremost document. Until you save the document to the local storage or a cloud service, it will be labeled as "untitled". But you don't have to save your documents immediately: Textkraft saves all changes automatically.
- 2** **Opens a document** from local storage or a cloud service. When you select a text document, you have two options:
 - **Open copy** opens an untitled copy of the document. The original file will not be changed.
 - When you use the **Open** command, all changes will be automatically saved to the original file you selected.When you select a non-editable document like a presentation or PDF, you can open it as a **preview**, to read it and copy parts of the text to other text documents.
- 3** The (x) button **closes the foremost document**. When the document is unsaved, Textkraft asks you if the document should be saved before closing. If you select "**Don't save**" the document is not recoverable!
- 4** This button shows you an **overview of all open documents**. You can **rearrange the order** of your documents by tapping and holding the page icons, **close documents** by tapping the little (x) buttons or you quickly **bring a document to the front** by shortly tapping on its page icon.
- 5** The **share text** menu contains all possible sharing features of Textkraft. The topmost command **Save as ...** is important to save new ("untitled") files to a real storage. The other commands allow **exports to different file formats** and sending your text to other people via messaging, e-mail or social networks.
- 6** This button **locks the app**. When you already defined a **passcode** in the settings, the app is immediately locked and you can leave it with the Home button. When you did not set it up before, the app prompts you for your personal 4-digit passcode. You must enter it twice to confirm. Do not forget your passcode, there is no back door to unlock Textkraft without!
- 7** Opens the **settings** window. Here you set your application wide preferences, like the languages you want to use, the font face and many more options.
- 8** Opens the keyboard and enters the **edit mode** for the foremost document. When you use this button instead of tapping on the text itself, the cursor will be automatically positioned where you left off editing the last time.

The bullets at the page bottom represent the **open documents**. The black bullet is the **foremost document**. You can access the next or previous document with a **swipe gesture** to the left or right. You can do the swipe anywhere on your text and you don't have to close the keyboard before swiping. The text below the dots is the storage path of your foremost document.

Local: /My documents/Textfile.txt

The toolbar at the bottom contains icons for: 1. New document (+), 2. Open document (up arrow), 3. Close document (X), 4. Overview of documents (grid), 5. Share text (share icon), 6. Lock app (lock), 7. Settings (wrench), 8. Edit mode (pencil).
